

WINDOW SHADE ASSY

Our window shutter assembly for business aircraft provide a clear view and optimal protection from light and sun, **and the price is also very impressive.**

Engineering

The Window Shade is an in-house development that has matured into a finished product through constant improvements and innovations. An important factor is also the weight, with only **835 grams**, the whole assembly is enormously lightweight.

Assembly

The assembly consists of two thermoformed parts, various milled and injection-molded parts, as well as the seal to the fuselage window and a transparent plastic window material coated on both sides with hard material.

The two time pleated roller shutter fabric is 100% opaque and made of flame retardant material.

The parts are assembled in-house into a ready-to-install assembly. This is a series production. One-off productions are also possible.
